A	Complete master descriptives	20

1 Scope and stage boundary

S31B computes descriptive statistics and non-canonical diagnostic growth rates from the frozen S30 release. It does not alter the source-of-truth dataset, create new canonical variables, construct estimation samples, infer integration order, or estimate structural elasticities.

2 Frozen dataset and variable coverage

The frozen release contains 37 canonical variables, 3637 long-format observations, and 125 annual wide-panel rows spanning 1901–2025. Every canonical variable enters the master table; the descriptive architecture therefore preserves the release rather than selecting a convenient subset.

3 Historical-window architecture

The registry contains 16 windows: 4 structural or structural-umbrella windows, 6 nested windows, 4 transition windows, one global window, and one supplementary bridge. Transition and event windows are descriptive only and are not eligible for testing or estimation.

4 Variable inclusion and reporting tiers

Tier A contains 16 core representations, Tier B contains 17 robustness representations, and Tier C contains 4 reference-only variables. These are presentation tiers derived from frozen S30 and S31A metadata; they do not reclassify the underlying analytical roles.

5 Growth-rate construction protocol

Positive levels use direct annual percent changes, shares use percentage-point changes, and existing frozen growth or difference variables enter directly without another transformation. Log levels do not drive the headline evidence when a frozen level counterpart exists. The growth panel is diagnostic, non-canonical, and confined to S31B.

6 Broad structural comparison

Table 1: Structural growth comparison

Variable	Global available		Pre-1974		Post-1974		Post-Fordist pre-GFC, 1974-2008		Post-GFC, 2009-2025	
G_TOT_GPIM_2017	2.61	(13.81)	5.21	(17.64)	-1.06	(0.65)	-0.78	(0.53)	-1.67	(0.46)
	[n=123]		[n=72]		[n=51]		[n=35]		[n=16]	
NFC_COMPENSATION_	-0.07	(1.17)	0.03 (1.37)	[n=44]	-0.15	(0.96)	-0.14	(0.94)	-0.17	(1.04)
SHARE_GVA	[n=96]				[n=52]		[n=35]		[n=17]	
Y_REAL_NFC_GVA_	3.83 (5.46)	[n=96]	4.66 (7.25)	[n=44]	3.13 (3.19)	[n=52]	3.52 (2.99)	[n=35]	2.31 (3.54)	[n=17]
BASELINE										

Cells report mean growth, standard deviation in parentheses, and valid n in brackets.

7 Pre-1974 decomposition

The 1940–1946 consolidation window is too short to carry regime-level distributional claims; it remains a bounded descriptive interval whose endpoint and annual-change evidence complements the longer Fordist core.

Table 2: Pre-1974 decomposition

Variable	Pre-Fordist avail- able	Pre-Fordist con- solidation, 1940- 1946	Fordist core, 1947- 1973
G_TOT_GPIM_2017	9.42 (21.25) [n=45]	-3.35 (0.87) [n=7]	-1.80 (1.97) [n=27]
NFC_COMPENSATION_ SHARE_GVA	0.18 (1.79) [n=17]	0.47 (1.70) [n=7]	-0.07 (1.06) [n=27]
Y_REAL_NFC_GVA_ BASELINE	3.82 (10.65) [n=17]	7.04 (10.05) [n=7]	5.19 (4.06) [n=27]

The 1940-1946 interval is a limited short-window descriptive.

8 Post-1974 decomposition

The post-1974 hierarchy separates the mature post-Volcker interval from the post-GFC configuration. The 2022–2025 interval remains descriptive only because four annual observations cannot establish a regime parameter.

Table 3: Post-1974 decomposition

Variable	Post-Fordist pre- GFC, 1974-2008		Mature Volcker pre-GFC, 1983-2008	post- pre-GFC,	Post-GFC, 2009- 2025		Post-GFC COVID, 2019	pre- 2009-	Post-COVID con- figuration, 2022- 2025
G_TOT_GPIM_2017	-0.78 [n=35]	(0.53)	-0.97 [n=26]	(0.44)	-1.67 [n=16]	(0.46)	-1.62 [n=11]	(0.44)	-1.52 (0.54) [n=3]
NFC_COMPENSATION_ SHARE_GVA	-0.14 [n=35]	(0.94)	-0.16 [n=26]	(0.88)	-0.17 [n=17]	(1.04)	-0.07 [n=11]	(0.77)	-0.33 (0.81) [n=4]
Y_REAL_NFC_GVA_ BASELINE	3.52 (2.99) [n=35]		3.74 (2.66) [n=26]		2.31 (3.54) [n=17]		2.04 (3.18) [n=11]		2.82 (0.82) [n=4]

The 2022-2025 interval is descriptive only.

9 Transition and event profiles

Transition and event windows are descriptive only and are not eligible for testing or estimation.

Table 4: Transition-event summary

Variable	Window	Initial	Terminal	Absolute change	Relative change	Mean annual change	n

DESCRIPTIVE TRANSITION WINDOW. NOT ELIGIBLE FOR TESTING OR ESTIMATION.

10 Output-capital growth correspondence

The correspondence table pairs the preferred frozen Tier A real-output level with the preferred frozen Tier A total-capital level. The descriptive output-capital growth ratio is not an estimate of the structural elasticity θ .

Table 5: Elasticity-oriented growth correspondence

Window	Output growth	Capital growth	Difference	Correlation	Descriptive ratio	Joint n
Global available	3.84	-1.59	5.43	-0.16	-2.41	95
Pre-1974	4.66	-2.20	6.86	-0.14	-2.11	44
Pre-Fordist available	3.82	-2.84	6.66	-0.42	-1.35	17
Pre-Fordist consolidation, 1940-1946	7.04	-3.35	10.39	-0.44		7
Fordist core, 1947-1973	5.19	-1.80	6.99	0.14	-2.88	27
Post-1974	3.13	-1.06	4.19	0.01	-2.94	51
Post-Fordist pre-GFC, 1974- 2008	3.52	-0.78	4.31	-0.23	-4.49	35
Mature post-Volcker pre- GFC, 1983-2008	3.74	-0.97	4.70	-0.11	-3.87	26
Post-GFC, 2009-2025	2.26	-1.67	3.94	0.02	-1.35	16
Post-GFC pre-COVID, 2009-2019	2.04	-1.62	3.66	0.31	-1.26	11
Post-COVID configuration, 2022-2025	2.73	-1.52	4.25	-0.63		3

The descriptive output-capital growth ratio is not an estimate of the structural elasticity θ .

11 Robustness and reference-only variables

Robustness variables remain visible in Appendix A and reference-only variables remain visible in Appendix B. Their inclusion preserves the frozen contract while preventing alternative representations from displacing the preferred Tier A evidence.

Table 6: Robustness descriptives

Variable	Window	n	Mean	SD	Minimum	Maximum	Missing share

12 Coverage and interpretation cautions

Missing observations are measured, never filled. Annual changes require consecutive calendar years, transition windows never support testing or estimation, and no annual output-growth/capital-growth ratio is constructed.

13 Validation summary

The authoritative validation ledger is copied into the report bundle. The final result requires the compiled PDF and page-by-page visual inspection to pass.
